Consistent Systems

Augmented Matrices

This:

$$\left\{egin{array}{l} x_1-2x_2+x_3=0 \ 2x_2-8x_3=7 \end{array}
ight.$$

Becomes:

$$\begin{bmatrix} 1 & -2 & 1 & 0 \\ 0 & 2 & -8 & 7 \end{bmatrix}$$

A linear system is **consistent** if it has at least one solution.

Two matrices are **row equivalent** if a sequence of row operations transforms one matrix into the other.

Suppose

$$A = \begin{pmatrix} 1 & 1 \\ 0 & 1 \end{pmatrix}, \quad B = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}, \quad C = \begin{pmatrix} 1 & 1 \\ 0 & 0 \end{pmatrix}, \quad \vec{b} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}$$

A and B are row equivalent

A and C are not row equivalent

Are the augmented matrices $(A \,|\: \vec{b})$ and $(C \,|\: \vec{b})$ consistent?

$$[A \mid \mathbf{b}] = egin{bmatrix} 1 & 1 & 1 \ 0 & 1 & 1 \end{bmatrix}$$

$$[A \mid \mathbf{b}] = \begin{bmatrix} 1 & 0 \mid 0 \\ 0 & 1 \mid 1 \end{bmatrix}$$

So $[A \mid \mathbf{b}]$ are consistent.

And $[C \mid \mathbf{b}]$ are not consistent.
